

# Hinewaka Shorthorns

## BULL SALE

**David and Pip Blackwood**  
*welcome you to Hinewaka for our*  
***Annual on Farm Bull Sale.***

*You are invited to join us for  
light refreshments after the sale.*

Shorthorns have been farmed on the Hinewaka and Glenside properties for over 140 years and five generations of the family. It wasn't until the late 1940's that the 'Glenside' stud was registered and it became one of the leading Shorthorn studs in the country, selling bulls all over New Zealand. Bulls were imported from England, Scotland, Australia and Canada to add to the bloodlines.

The 'Glenside' prefix was changed to 'Hinewaka' after the Glenside property was sold in 1974 and all the stud was then run on Hinewaka.

Beginning my farming career in 1983 I was very fortunate to take over such an established, quality herd of Shorthorn cows. We have endeavoured, over the years, to build the herd in to one of the best in the country.

With the use of first Beefplan and then Breedplan, we have been able to objectively select females that suit our environment and progress our breeding objectives rapidly. This progress can be measured against other breeders throughout Australia and New Zealand and we know we are on the right track. We can confidently offer for sale a selection of superior bulls that will enhance the profitability of your cow herd operation.

Hinewaka is a 720ha summer dry, hill country property of medium to steep contour, 1400 feet above sea level.

All heifers are mated as yearlings, each year using some of our top yearling bulls. Heifers not in calf as a yearling are culled. Any heifer helped at calving, and it's progeny is culled.

We are proud to offer the bulls in this catalogue for auction at Hinewaka. We are not selling at the National. Our top bulls are included in this catalogue.

# Conditions of Sale

## **Fertility Guarantee**

All bulls in this catalogue have been vet tested and are guaranteed fertile and in working order.

The purchase price of any bull proven to be infertile will be refunded by the vendor, provided the bull has been kept in fair and reasonable condition by the purchaser, and the purchaser has been notified within 6 months from the date of sale.

The bull will become the property of the vendor and will be disposed of at his discretion.

## **Feet Guarantee**

All bulls in this catalogue carry a feet soundness guarantee until they are four years of age. Should they develop a fault which affects the bulls ability to breed, the bull is to be returned to the vendor who will refund to the purchaser a proportion of the purchase price.

The method of refund applying to the above guarantees will be that the vendor will make credit available to the purchaser via subsequent bull sales held by the vendor.

## **Insurance**

All bulls become the buyers responsibility from the fall of the hammer.

## **Delivery**

Free delivery in the North Island within 7 days

## **ENQUIRIES:**

**David Blackwood**

Phone: 06 372 7615

Email: [blackwood@wizbiz.net.nz](mailto:blackwood@wizbiz.net.nz)

## **PGG WRIGHTSONS & CARRFIELDS**

**Brian Diamond**

Phone: 06 377 3311

## **Auctioneers and Booking Agents**

PGG Wrightsons, Wairarapa & Carrfields

### **Commission**

6% will be paid to all companies introducing purchasers prior to the sale.

### **TB C10**

### **BVD**

All bulls have been tested negative for BVD and vaccinated.

## **PURCHASING REBATE**

All intending purchasers must register at the sales office prior to the sale.

PGW will pay a purchasing rebate of 6% of the purchase price excluding GST, plus GST, to livestock companies & recognised independent livestock agents with a PGW account who have introduced buyers to PGW before the sale and/or accompanied buyers to the sale.

## **TERMS AND CONDITIONS**

The New Zealand Stock & Station Agent's Association Conditions of Sale and, to the extent deemed relevant by PGG Wrightson Limited (PGW), PGW's Terms of Sale apply to this sale. When proceeds are credited or a purchase is debited to a PGW monthly credit account, then PGW's Monthly Account Terms of Trade (as amended from time to time) apply to the extent deemed relevant by PGW. These terms can be inspected at the registration desk and on the wall in the auction room. The current versions of PGW's Terms of Sale and Monthly Account Terms of Trade are also available online at:

*[www.pggwrightson.co.nz/Our-Company/Terms-and-Conditions](http://www.pggwrightson.co.nz/Our-Company/Terms-and-Conditions)  
or in hardcopy on request.*

**Please bring this catalogue to the sale.**

# Explanatory Notes

## Sale Catalogues

### **Estimated Breeding Values (EBVs)**

An estimated Breeding Value EBV is an estimate of the genetic value of that particular animal for each trait measured.

### **ACCURACY**

An accuracy is presented with each EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy the less the animal's EBV are likely to change as more information is analysed for that animal or its relatives. Accuracy below 75% should be considered to be low.

EBVs are provided for the following traits

### **GESTATION**

GL Gestation Length EBV (days) is based on AI records. Lower (negative) GL EBVs usually indicate easier calving and increased growth after birth, due to more days of growth compared to their contemporaries.

BWT: Birth Weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

### **GROWTH**

Milk: 200-Day Milk Ebv (kg) is an estimate of an animal's milking ability. For sires, this EBV is indicative of their daughter's milking ability as it affects the 200 and 400 day weight of their calves.

200: 200-Day Growth EBV (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400: 400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600: 600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

MWT: Mature Cow Weight EBV (kg) is an estimate of the genetic difference in cow weight at 5 years of age. Smaller, or more moderate EBVs are generally more favourable.

## FERTILITY

SS: Scrotal Size EBV (cm) is an indicator of male fertility in regards to semen quality and quantity. Higher (positive) EBVs indicate higher fertility. SS is also positively associated with female fertility.

## COMPARING EBVs:

The EBVs for Beef Shorthorns can not be compared with EBVs for animals of another breed. They should be compared with the current average EBVs for Australasian Beef Shorthorn shown below.

2017 SHORTHORN BREEDPLAN AVERAGES FOR 2015 BORN CALVES						
GL	Birth	200 Wt	400 Wt	600 Wt	Milk	SS
-1.6	+3.0	+26	+36	+49	+6	+1.4
CWT	EMA	Rib	Rump	RBV%	IMF%	
+33	+4.1	-0.5	-0.5	+1.0	+0.5	

The Australasian Shorthorn GROUP BREEDPLAN Estimated Breeding Values contained in this Sale Catalogue were compiled by the Agricultural Business Research Institute (ABRI) from data supplied by the breeders. Neither the New Zealand Beef Shorthorn Association nor the ABRI oversee or audit the collection of this data.

## The Self - Replacing Index

“The Self-replacing Index” ranks bulls on their ability to generate profit (profit per cow mated) in a herd situation in which some females are retained for breeding and surplus females, along with all males, are slaughtered.

The main drivers of profit addressed by the Index include (in order of economic importance):

- Direct and Maternal Calving Ease
- Growth
- Meat Yield
- Cow Survival
- Finishing Ability
- Fertility
- Cow Efficiency

In short, selection on the Index is expected to favour production of a cowherd with excellent reproductive efficiency, rearing progeny with moderate-to-high growth rates and high yielding carcasses.

- Comparing the lifetime profitability of two bulls:

The following example illustrates how potential differences in lifetime profitability can be approximated between bulls with different Indexes. These estimates of value differences may be conservative.

Two bulls with Self-replacing Indexes of \$40 and \$20 are mated to genetically similar cows. If each bull mates 200 cows during its lifetime, the first bull will generate \$2000  $(\$40 - \$20) / 2 \times 200$  more profit during its lifetime than the second bull (the \$20 profit advantage must be divided by 2 because a bull only passes half his genes on to each of his progeny).

## The Dairy Index

Estimates the genetic differences between animals in net profitability per cow joined for an example commercial dairy herd targeting the production of dairy beef progeny from dairy cows and heifers where all progeny are slaughtered. Steers are assumed marketed at 520 kg live weight (280 kg carcass weight and 6 mm fat depth) at 20 months of age. While calving ease is by far the most important profit driver in the Index, growth and to a lesser extent meat yield also contribute.
